Hint and Tip Number 29: Getting The Cottage Ready

June 11th, 2018

As you're preparing your cottage for the summer months, why not consider installing a Ductless Mini-Split Heating and Cooling System.

The source of your cottage now may be wood, oil, electric or propane, but have you considered installing a Ductless Mini-Split System? Not only will the Mini-Split System keep you and your guests warm and comfortable on those rainy, damp days we experience here on the Island but it will also keep everyone cool and happy on those very hot and muggy days as well.

The Mini-Split System will also cut down on your energy costs and it will allow you to keep your cottage open way into the fall if you prefer.

Phone the Ductless Mini-Split Heat Pumps System experts at Thomas Edison Electric for your FREE In- Home Evaluation to discuss all the advantages of installing a System in your cottage. It is a decision you won't regret.
