Hint and Tip Number 3: Be Prepared For Power Outages

Nov. 30th 2017

Most power outages will be over soon after they begin. Some however, can last much longer. The power could be out for days or even weeks.

What May Cause Power Outages

Power outages are often caused by poor weather conditions such as snow storms, high winds, freezing rain, sleet storms and tropical storms and floods. However, cold snaps and heat waves can also overload the electric power system. When we lose our power we soon realize how comfortable we are with electricity and how we take it for granted.

It's Not Just Comfort That's Compromised In A Power Outage

- Medical equipment that need power to operate may fail, putting the sick person in your home at risk.
- Refrigerated and frozen food may spoil.
- Important medication that need to be refrigerated are at risk.
- You could have no heat or air conditioning.
- Frozen pipes could burst or leak.
- Sump Pumps may fail.
- If you just have a cordless phone, you may be left without phone service.
- If you don't have a battery powered radio, you may have no way of monitoring news broadcasts.
- Your electronic equipment such as smart phones, tablets, laptops and computers may be rendered useless if you don't have a battery powered charger.

Your Solution To These Problems Is To Install An Automatic Standby Power Generator

An Automatic Standby Power Generator comes on automatically when the power goes out and shuts off automatically when the power comes back on. Contact Thomas Edison Electric today to schedule your FREE In-Home Evaluation. Thomas Edison Electric is your Generac Generator Authorized Dealer for installation and service.
