Hint and Tip Number 34: Automatic Standby Power Generators

July 16th, 2018

What Is An Automatic Standby Power Generator?

An Automatic Standby Power Generator is exactly what it states in the name. When you loose power due to a storm or downed power lines, your Automatic Standby Power Generator automatically turns on and takes over so you will have power. It many cases, you may not even notice the loss of power to your home. When the power is restored, the Automatic Standby Power Generator will shut itself off.

Benefits Of An Automatic Standby Power Generator For Business

Standby Power Generators are a great idea for a business. Downtime caused by a power outage can hurt any type of business, especially if your business depends on power to operate. Having a business full of workers with computers that wont' turn on or machinery that is at a stand still is not a productive environment. In other words a business will be rendered useless without power.

Benefits Of An Automatic Standby Power Generator For A Home

Standby Power Generators are the smart choice for any home. Loosing air conditioning on a hot day, or heat on those cold winter days is not very appealing. What about those important medications that need refrigeration or medical equipment that needs power that may lead to a life-threatening problem without power.

Whether is for your home or business, contact Thomas Edison Electric for your FREE Evaluation and to schedule the installation of your Automatic Standby Power Generator. Thomas Edison Electric are authorized dealers and installers of Generac Generators.
