To Helpful Hints and Tips from Thomas Edison Electric

Hint and Tip Number 6: Home Theatre Perfection

Dec. 22nd, 2017

If you received or purchased a state-of-the-art home theatre system, do not try and install it yourself. To receive the best sound and quality consult a professional electrician in the early stages of installation.

Handle The Load

A big-screen TV won't strain your electrical system. However, factor in a disc player, set up box, stereo receiver and multiple speakers, and you might be talking about a serious electrical load. A licensed electrician can easily test your electrical system to ensure it's ready to power your dream theatre. If upgrades are necessary, you can take confidence that new wiring or circuits will be installed by a qualified technician from Thomas Edison Electric.

All Those Cords

When Thomas Edison Electric is there to install your home theatre system, they can make a plan to hide all of your home theatre's power cords away so that the room looks great and there's no risk of tripping in a darkened room. Without ruining the look of your room, our Technicians can run cables within your walls and install new outlets to avoid that snarl of wires.

Protect Your Investment

Your home theatre is just as venerable to lighting strikes and sudden power surges as your home computer. A home theatre is a large investment and instead of investing in a store-bought surge protection bar, you should consider installing a whole house surge protection system. With this system your entire home's electronics and appliances will be safeguarded.

Contact Thomas Edison Electric today to install your home theatre system, new outlets and a Whole house surge protection system. It's an investment well spent.
